

Weighted circuits, wired: edges shared by all three ablation methods (rkeep3e3fix)
blue edge = positive, red = negative; width = the weakest normalised weight across Z/A/C; node shade = the weakest attribution across Z/A/C; α = scaling coefficient

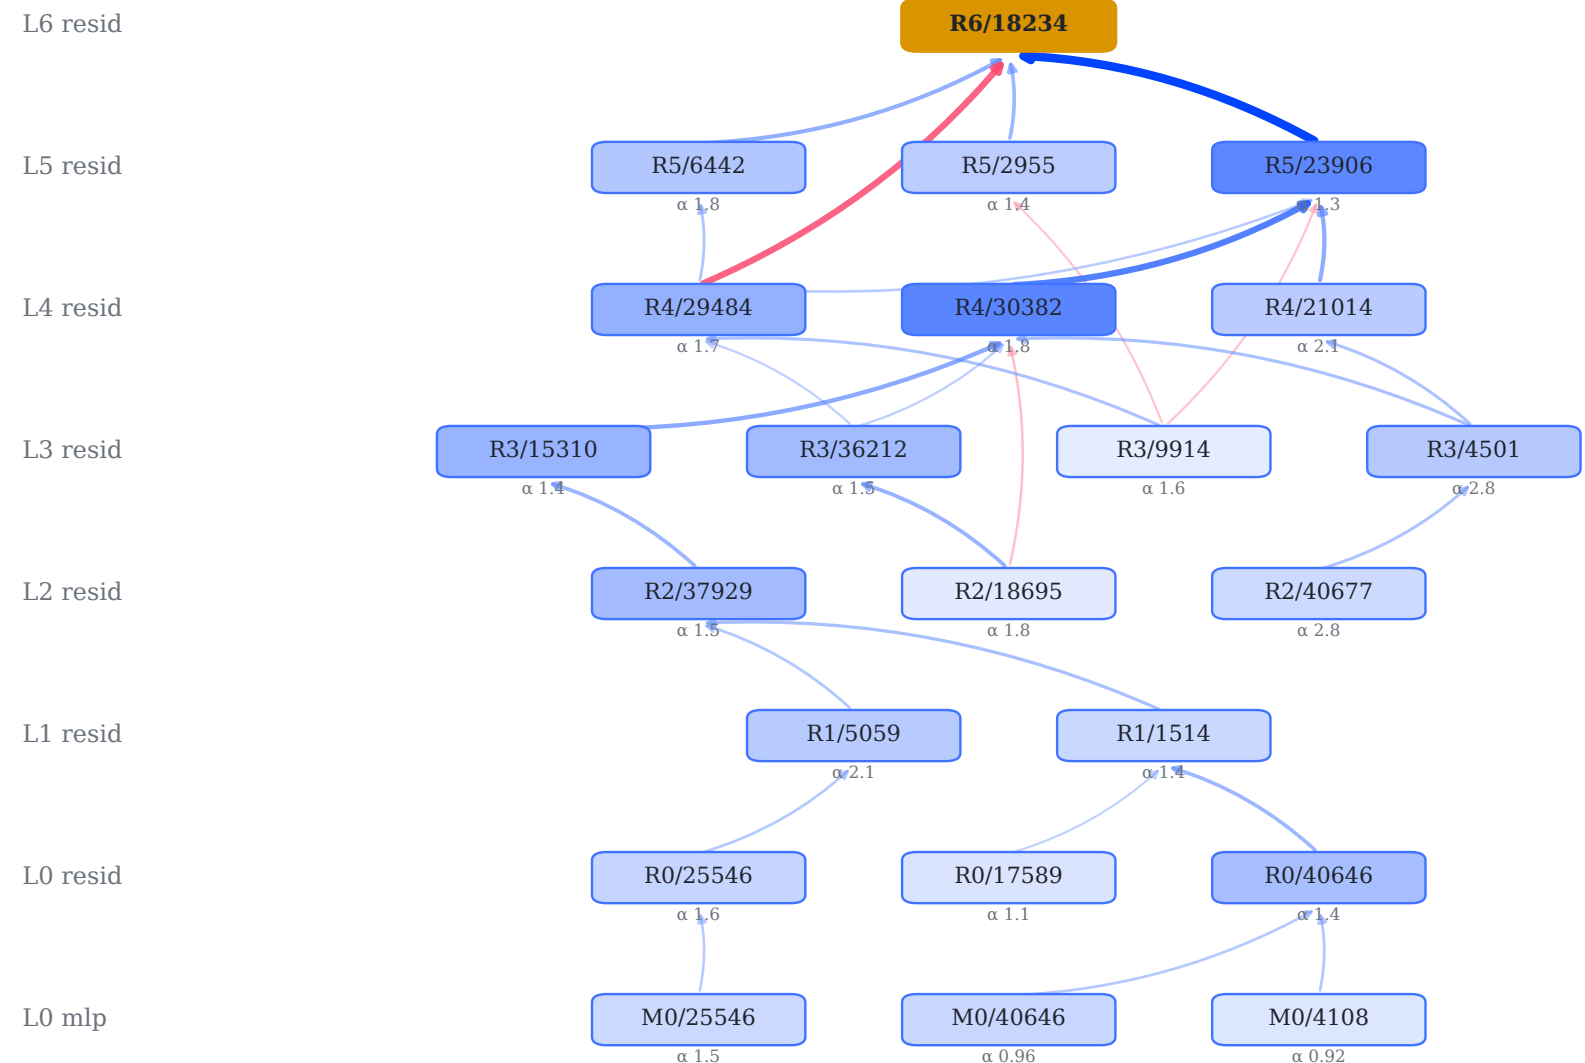

1.resid.12137 (127-node circuit)
consensus edges: 224 between members + 59 into the target, 44% of edge mass; 19 drawn

2.attn.33479 (157-node circuit)
consensus edges: 80 between members + 99 into the target, 27% of edge mass; 16 drawn

6.resid.18234 (488-node circuit)
consensus edges: 142 between members + 43 into the target, 15% of edge mass; 28 drawn

11.mlp.30743 (496-node circuit)
consensus edges: 168 between members + 25 into the target, 14% of edge mass; 28 drawn
